

Focus & Cooperation

M-Comp A/S: strong focus on industrial monitors - and cooperation.

M-Comp A/S has become a strong player within development and production of industrial monitors and digital signage solutions. M-Comp A/S has developed new solutions for buses and ships, as well as exciting new products for the food industry.

M-Comp A/S has established itself as a strong player when it comes to industrial monitors and digital signage solutions, and has developed new unique solutions for use in the transport sector with focus on busses and not least for the food industry – with focus on food production. These sectors require robust solutions, which must meet a number of specific product requirements, as well as requirements for an optimized cost structure.

M-Comp A/S covers all phases from idea to final product: project management, procurement, pre-qualification, certification and the actual production and logistics. We have recently expanded in areas such as mechanical design and EMC / ESD, and in establishing close cooperation with competent partners.

The overall idea is to present solutions to customers in close cooperation with our suppliers and external partners, based on the customer's actual needs and take on the responsibility on all or parts of for the project.

M-Comp A/S's overall focus is on the modular concept, that gives the advantage of a short development phase, a more streamlined product qualification, faster production and the lowest cost. The modular concept is obvious regarding low-volume and high-mix production, where M-Comp A/S is really strong partner.

M-Comp A/S is strong on cooperation. Those who can cooperate wins. In the future, it is not only knowledge and gizmos that counts. It is the ability to collaborate and manage knowledge in the right way in due time, which is crucial.

There is a completely different and more open mindset today and it is no longer the one person or company who knows the most that wins, but those persons or companies who knows the most together and in cooperation can translate it into sustainable business.

We can create more and greater results together than separately.
